

THREAT AND VULNERABILITY POLICY

Purify Air is committed to the protection of franchisees, workers, client and customer data and the integrity of network systems from illegal or damaging actions by individuals, either knowingly or unknowingly. To achieve this, we will develop and implement security measures and processes to prevent data loss or damage from cyber security threats, social engineering fraud risks and malicious software.

AIMS AND OBJECTIVES

We recognise the importance of protecting our systems and data from unauthorised access and corruption. To achieve this, we will establish standards for acceptable use of the company's information and communication technology and security facilities and facilitate lawful usage that supports Purify Air's business in a manner consistent with legislation, policies, codes and standards.

IMPLEMENTATION

We will raise awareness among our franchisees, workers, and others and educate those most vulnerable to cyber threats and information technology workers who handle technical and physical security. We will inform and educate users about:

- general use and protection of company proprietary information;
- security of mobile and computing devices connected to company networks;
- unacceptable use of access to data and prohibited system and network activities;
- use of information technology and equipment; and
- use of communications technology (including internet, social media and mobile phones)

RESPONSIBILITIES

Management is responsible for developing and implementing principles and guidelines to protect and secure the company's information technology, equipment, and communication systems.

Franchisees and workers are responsible for ensuring that their online activities are in accordance with company standards and do not expose the company, clients, customers and company information technology and communications systems to risks of cyber security and social engineering attacks by adhering to company policies and rules regarding the use of company information technology, equipment, communication and security systems.
